

Software Intellectual Property Audits and IP Management Solutions

Your client technology companies may have created significant amount of software assets, but in today's world of open-sourced, out-sourced, easily-searched and easily-copied software, they are not sure what's really in the code and how much of it they truly own. They need your help when faced with a Merger and Acquisition event or with equity investment, product introductions, IP indemnity demands, technology licensing etc.

If you are currently involved in a case where you require a clear picture of Intellectual property ownership and the software licensing of your client's software assets, we can help. The Protecode Certified™ IP Audit service is efficient, fast, and non-intrusive.

Protecode's automated software analysis solutions and industry expertise allows legal firms to identify code licensing obligations for their clients within one day most of the time - either by themselves or with our expert help. We operate a confidential process through which we discuss the needs and the requirements of the client, and then offer a range of solutions that would best fit the client's needs.

Protecode also offers software products that allow technology companies to identify and report on their code licensing obligations. We have the only real-time preventive IP management solution in the industry, helping to operationalize IP record keeping and management. Protecode products are easy to adopt, do not require developers to be trained in IP issues, do not disturb existing software development processes and are reliable, confidential and secure.

Contact Protecode and find out how you and your clients can benefit.
